CAREER OBJECTIVE

A data science engineer with deep domain knowledge of handling data, machine learning, deep learning, computer vision, nlp and with a demonstrated history of turning large sets of data into predictive model. Seeking to leverage acquired academic knowledge for the growth of the company and to grow professionally.

EDUCATION

Degree/Certificate	**Institute/Board**	**CGPA / Percentage**	**Year**
M.Tech (Data Science)	IIT, Palakkad	7.27 (Current)	2020-Present
B.Tech Electronics and Instrumentation(EIE)	TECHNO INDIA	8.62	2020
Class XII	D.A.V PUBLIC SCHOOL, B.S.E.B	85%	2016
Class X	D.A.V PUBLIC SCHOOL, B.S.E.B	91%	2014

TECHNICAL SKILLS

- **Language**
  Python, C, SQL
- **Frameworks**
  Flask, Django, VStudio Code
- **Databases**
  MariaDB, MongoDB, SQLite
- **Python Libraries**
  Tensorflow, Sklearn, Numpy, Pandas, NLTK, CV
- **Operating system**
  Windows, Linux

WORK EXPERIENCE

- **Data Science Intern** **Jun 2021 to Aug 2021**
  Alorb Technology
  Developed regressive model for Air Quality prediction of New-Delhi stations using Auto-Regression and ARIMA technique. Lead the website front-end and back-end connection.

PROJECTS

- **Multi-label Image Classification and Image Description** **Mar 2021 to May 2021**
  Dr. Mrinal Kanti Das
  Course project
  Developed a model for multi-label image classification that classifies the given image into appropriate multi-label from given 20 labels with approximately 85% accuracy using pre-trained models like Vgg16, Inception, MobileNet. Built a model with LSTM for image description that gives the one line description of image with 75% accuracy and also built front-end for the same using Flask. *Link*

- **Rainfall Forecasting** **Dec 2020 to Feb 2021**
  Sahely Bhadra
  Course project
  Performed data wrangling and data munging. Developed multi Auto-regression(AR) model for local rainfall prediction for the given data of 34 local stations. Predicted value of rainfall for next 7 days. *Link*

- **Question Answer system** **Oct 2020 to Nov 2020**
  Dr. Mrinal Kanti Das
  Course project
  Developed both the front-end and back-end of the Question answer system that gives the best possible answer of a question asked by the user in a particular domain. And, if the answer of any particular question is not present in the system then an expert of that domain will be notified to provide the answer. Built using python language, TF-IDF to give proper weights to words and cosine for similarity. *Link*

- **Vital Sign based Disease Identification using ML** **Jul 2019 to May 2020**
  Nabanita Chakraborty
  UG project
  This project uses the concept of Machine Learning(Random Forest, SVM, KNN) for prediction of the disease based on the features extracted from the ECG signal of a person. Developed the GUI for the same. *Link*

POSITIONS OF RESPONSIBILITY

- **Hostel Affair Representative, PG**
  Worked with management to implement better working of hostel affairs and effective outreach. Ensured that students issue are resolved at the earliest.

ACHIEVEMENTS

- **Merit Certificate**
  2nd rank holder during B.tech

- **GATE 2020**
  Secured AIR 268

EXTRA CURRICULAR ACTIVITIES

- **Campus Ambassador for MarkTechPost Company**
  Coordinating between Company and college.

- **Course on "Applied Machine Learning using python" from Michigan University**
  This course covered almost part of the Machine Learning algorithms.

- **Specialization on Deeplearning.Al Tensorflow Developer by Deeplearnign.AI**
  Covered Introduction to tensorflow, CNN, NLP, Sequence time series.

- **Icche Dana**
  Organization for the nourishment and welfare of weaker society.
